

MiniBox+ Return on Investment

NY Allergy and Sinus Centers

Prepared by Erik Bernard, PulmOne Advanced Medical Devices

At one full panel a day, the MiniBox+ pays for itself inside the first year, and every panel after that is about \$142 of margin before staff time.

The MiniBox+ is a one time purchase of **\$37,800** (quote 00007445). Here is what it returns once it is running in your office.

The per test economics

	Per full panel
Reimbursement (94060 + 94726 + 94729)	~\$147
Cost to run (mouthpiece + DLCO gas)	~\$5
Net before staff time	~\$142

Commercial plans typically pay more than Medicare, so \$147 is a conservative anchor. There is no annual maintenance contract.

Annual revenue by volume

Assumes a full panel at about \$147, a 52 week schedule, and the office already seeing these patients.

Volume	Panels / yr	Gross / yr	Net / yr
5 per week (about 1 per day)	260	~\$38,200	~\$36,900
10 per week (about 2 per day)	520	~\$76,400	~\$73,800
15 per week (about 3 per day)	780	~\$114,700	~\$110,800
20 per week (about 4 per day)	1,040	~\$152,900	~\$147,700

When the device pays for itself

The \$37,800 device is fully paid off at about 266 full panels:

Volume	Time to pay off the device
5 per week	about 12 to 13 months
10 per week	about 6 months
15 per week	about 4 months
20 per week	about 3 months

After that, the device is yours and roughly \$142 of every panel is margin before staff time.

The takeaway

Even at one full panel a day, the MiniBox+ pays for itself inside the first year and then generates revenue on patients you are already seeing, instead of referring that testing and its reimbursement out the door.

Check your own New York rates: CMS Physician Fee Schedule Lookup Tool, cms.gov/medicare/physician-fee-schedule/search (search CPT codes 94010, 94060, 94726, and 94729 and select your New York locality).

Figures are illustrative. Actual reimbursement varies by payer mix, plan, and New York locality. Spirometry only visits reimburse less than a full panel.
