

PulmSuite

Every breath, delivered.

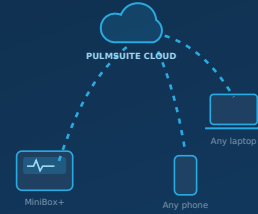

PulmSuite is the cloud platform built for the MiniBox+. Every PFT, on demand, on any device, anywhere in the world. The moment the test ends, it is in your hands.

HIPAA COMPLIANT

HITRUST CERTIFIED

BUILT ON AWS

NO NEW HARDWARE

HOW IT WORKS

Five steps. Zero new hardware.

1

Patient is seated

No booth. No coaching for panting maneuvers.

2

MiniBox+ runs the test

Spirometry, lung volumes, DLCO, one session.

3

Result syncs

One dashboard, one centralized database, in real time.

4

Physician signs off

Reviews graphs, concludes, and signs, from any browser.

5

Done

It is the MiniBox+ you already have, upgraded.

WHAT PULMSUITE DELIVERS

The cloud brain for the MiniBox+ you already own

Secure by design

HIPAA compliant and HITRUST certified, built on Amazon Web Services. Patient data protected at every step.

One patient record

Spirometry, lung volumes, and DLCO from every MiniBox+: one timeline, one place to review and sign.

Remote review and sign

The PFT happens at the site. The physician reads, concludes from a personal conclusion library, and signs from anywhere.

Seamless connection

PulmSuite pairs with your MiniBox+ automatically. No installs, no updates, no technician visits.

Optional EMR integration

Pair PulmSuite with EMR integration and PFT results sync directly to your EMR patient record via HL7.

Real time, every time

Results appear on the dashboard the moment the test is complete, not at end of day, not after an upload.

From your phone

Review graphs, comment, and sign off from any browser on any device. No app, no VPN, no workstation.

Every office, one dashboard

Run MiniBox+ units at multiple locations and see every result in one place, the moment each test finishes.

Anywhere in the world

At home, between clinics, or on vacation: your patients never wait for you to get back to the office.

HIPAA Compliant

Patient privacy protected end to end

HITRUST Certified

Independently audited security framework

Built on AWS

Enterprise grade cloud infrastructure

You are holding the flat version. The live PulmSuite demo runs in any browser, animated, interactive, and always current. Ask us to send the link.
