

PulmSuite

Every breath, delivered.

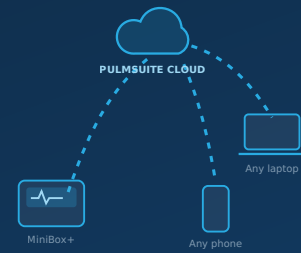

PulmSuite is the cloud platform built for the MiniBox+. Every PFT, on demand, on any device, anywhere in the world. The moment the test ends, it is in your hands.

HIPAA COMPLIANT

HITRUST CERTIFIED

BUILT ON AWS

NO NEW HARDWARE

HOW IT WORKS

Five steps. Zero new hardware.

PulmSuite works with the MiniBox+ already in your practice.

1

Patient is seated

No booth. No coaching for panting maneuvers.

2

MiniBox+ runs the test

Spirometry, lung volumes, DLCO, one session.

3

Result syncs

One dashboard, one centralized database, in real time.

4

Physician signs off

Reviews graphs, concludes, and signs, from any browser.

5

Done

It is the MiniBox+ you already have, upgraded.

WHAT PULMSUITE DELIVERS

The cloud brain for the MiniBox+ you already own

Secure by design

HIPAA compliant and HITRUST certified, built on Amazon Web Services. Patient data protected at every step.

One patient record

Spirometry, lung volumes, and DLCO from every MiniBox+: one timeline, one place to review and sign.

Remote review and sign

The PFT happens at the site. The physician reads, concludes, and signs from anywhere.

Seamless connection

PulmSuite pairs with your MiniBox+ automatically. No installs, no updates, no technician visits.

Optional EMR integration

Pair PulmSuite with EMR integration and PFT results sync directly to your EMR patient record via HL7.

Real time, every time

Results appear on the dashboard the moment the test is complete, not at end of day, not after an upload.

PRACTICE WITHOUT WALLS

If you have an internet connection, you have your PFTs

Every test run on your MiniBox+ is waiting for you: on your phone, on your laptop, at home, at your other office, or on vacation on the other side of the world. You do not need to be in the office anymore.

From your phone

Review graphs, comment, and sign off from any browser on any device. No app to install, no VPN, no workstation.

Every office, one dashboard

Run MiniBox+ units at multiple locations and see every result in one place, the moment each test finishes. One point of control for your whole practice.

Anywhere in the world

At home, between clinics, or on vacation: your patients never wait for you to get back to the office. Touch every patient from wherever you are.

THE PHYSICIAN WORKFLOW

Read, conclude, and sign in under a minute

Your personal conclusion library

Pick from your own saved conclusions, edit one, or write your own, then save it for next time and sign. Common findings become one tap: normal study, obstructive defect with bronchodilator response, restrictive pattern with reduced DLCO. The report is signed and finalized from any browser, wherever the physician happens to be.

You are holding the flat version. The live PulmSuite demo runs in any browser, animated, interactive, and always current. Ask us to send the link.

SECURITY AND COMPLIANCE

Built for healthcare from day one

HIPAA Compliant

Patient privacy protected end to end

HITRUST Certified

Independently audited security framework

Built on AWS

Enterprise grade cloud infrastructure
